CLINICAL HISTORY	C/O RT KNEE PAIN DUE TO MVA	GENDER	F

MRI OF THE RIGHT KNEE

CLINICAL HISTORY: Right knee pain, status post MVA.

TECHNIQUE: Multiplanar and multisequential MRI of the right knee was obtained.

FINDINGS: Both medial and lateral menisci are intact. The anterior and the posterior cruciate ligaments, medial collateral ligament and lateral stabilizers are unremarkable.

The extensor mechanism is unremarkable. There is slight lateral tilting of the patella. The patellar cartilage is intact. The trochlear cartilage is intact. There is small-sized joint effusion. There is no Baker's cyst. Popliteus tendon is intact.

There is fluid noted within the prepatellar and superficial infrapatellar bursa, compatible with deep infrapatellar bursitis. There is small amount of fluid noted within the semimembranosus bursa, compatible with semimembranosus bursitis.

IMPRESSION:

1. Prepatellar and superficial infrapatellar bursitis.
2. Semimembranosus bursitis.
