FINAL REPORT

HISTORY: 034Y status post injury with knee pain

PRIORS: none

PROTOCOL: Sagittal proton density and T2 weighted images and coronal T1 and STIR images were obtained. Additional axial fat suppressed T2 weighted images were obtained. Images were obtained on a high field MRI.

FINDINGS:

Cruciate Ligaments: Intr substance tear/sprain of the posterior fibers of the anterior cruciate ligament is identified. There is no evidence of disruption. The posterior cruciate ligament is intact.

Collateral Ligaments: The medial collateral ligament is intact. The lateral ligamentous complex is intact.

Menisci: There is a tear of the posterior horn of the medial meniscus. The lateral meniscus is intact.

Osseous Structures: The osseous structures demonstrate normal marrow signal characteristics with no evidence of cortical disruption.

Extensor Mechanism: The patella tendon is intact. The visualized portion of the quadriceps tendon is likewise intact. The patella retinaculæ are intact.

Tear within the popliteus muscle is identified

Joint Effusion: There is a joint effusion
