**STAND-UP MRI OF THE BRONX, P.C.**

2050 Eastchester Road, Suite 1B • Bronx, NY 10461

Phone: 718.678.1970 • Fax: 718.678.1975

**MULTI-POSITION MRI**

Accredited by the American College of Radiology

**KERLINE ANTHONY****N10004244-BI**    **Report Date:** 02/11/2021**DOB:** 08/22/1960**Exam Date:** 02/10/2021**IMELDA CRUZ BANTING, MD**  
**729 PELHAM PKWY N**  
**BRONX, NY 10467****MAGNETIC RESONANCE IMAGING OF THE RIGHT KNEE****TECHNIQUE:** Multiplanar, multisequential MRI was performed in the recumbent position.**HISTORY:** The patient complains of right knee pain.**INTERPRETATION:** Anteromedial subcutaneous edema is noted coalescing anterior to the medial retinaculum. Sprain of the medial collateral ligament is identified anteriorly.

There is sprain of the proximal femoral fibular ligament.

Proximal popliteus tendinosis/tendinopathy is also identified.

Synovial fluid is noted within the knee joint.

There is patellofemoral chondromalacia present with narrowing of the patellofemoral joint compartment. Proximal patellar tendinosis/tendinopathy is seen.

Osseous signal and morphology are, otherwise, unremarkable. The medial meniscus, the lateral meniscus, the lateral collateral ligament, the anterior and posterior cruciate ligaments, quadriceps tendon is, otherwise, unremarkable.

**IMPRESSION:**

- Anteromedial subcutaneous edema coalescing anterior to the medial retinaculum.
- Sprain of the medial collateral ligament anteriorly.
- Sprain of the proximal femoral fibular ligament.
- Proximal popliteus tendinosis/tendinopathy.
