Exam requested by:
DAVID HAN PA
13525 79TH ST
HOWARD BEACH NY 11414

SITE PERFORMED: LHR OZONE PARK

SITE PHONE: (718) 544-5151

Patient: SINGH, ANEISHA
Date of Birth: 06-03-2008
Phone: (917) 755-9007
MRN: 14343538R **Acc:** 1022249932
Date of Exam: 03-11-2022

EXAM: MRI LEFT KNEE WITHOUT CONTRAST

HISTORY: Knee pain. History of motor vehicle accident 12/18/2021.

TECHNIQUE: Multiplanar, multi-sequence noncontrast MRI of the knee was obtained on a 3T scanner according to standard protocol.

COMPARISON: None.

FINDINGS:

Menisci:

The medial meniscus is intact.
The lateral meniscus is intact.

Articular cartilage:

The cartilage of the medial compartment is preserved.
The cartilage of the lateral compartment is preserved.
The patellar and trochlear cartilage is preserved. Asymmetry of the trochlear facets with hypoplastic medial trochlear facet and flattening of the trochlear groove in keeping with trochlear dysplasia (seen most superior axial section displaying trochlear cartilage).

Extensor mechanism:

Intact visualized distal quadriceps tendon.
The patellar tendon is intact.
Intact patellar retinacula.
No edema in the Hoffa's or quadriceps fat pad.

Collateral Ligaments:

Intact medial collateral ligament (MCL). The visualized pes anserine tendons are intact.
Intact lateral collateral ligament (LCL). Intact visualized iliotibial band, distal biceps femoris tendon and popliteus tendons.

Cruciate Ligaments:

Confidential

Continued: Page 2 of 2
Patient: SINGH, ANEISHA
Date of Birth: 06-03-2008

Intact anterior cruciate ligament (ACL).
Intact posterior cruciate ligament (PCL).

Bones:
No occult fracture or osteonecrosis.
Intact proximal tibiofibular joint.

Fluid:
Small joint effusion.
No popliteal cyst.
No synovitis or intra-articular body.

Muscles and nerves:
No muscle atrophy, or edema.
The visualized sciatic tibial, and common peroneal nerves are preserved.

Subcutaneous tissues: No subcutaneous edema or fluid collection.

IMPRESSION: MRI of the left knee demonstrates:

1. Small joint effusion.
2. Trochlear dysplasia.
3. No meniscal tear.
4. Intact cruciate and collateral ligaments.
5. The articular cartilage is preserved.

Thank you for the opportunity to participate in the care of this patient.
