

AGE: 060Y (M)
DOB: 05/19/1961

HISTORY: 060Y status post injury with knee pain

PROTOCOL: Sagittal proton density and T2 weighted images and coronal T1 and STIR images were obtained. Additional axial fat suppressed T2 weighted images were obtained. Images were obtained on a high field MRI.

FINDINGS:
Cruciate Ligaments: Fluid in the posterior fibers anterior cruciate ligament consistent with intrasubstance tear/sprain. No disruption is identified. The posterior cruciate ligament is intact.

Collateral Ligaments: The medial collateral ligament is intact. The lateral ligamentous complex is intact.

Menisci: There is a tear within the posterior horn of both the medial lateral menisci.

Osseous Structures: Cystic change within the medial patellar facet is identified consistent with chondromalacia patella.

There is also osseous edema within the intercondylar region of the femur.

Extensor Mechanism: The patella tendon is intact. The visualized portion of the quadriceps tendon is likewise intact. The patella retinaculæ are intact.

Joint Effusion: There is a joint effusion present

IMPRESSION
TEAR WITHIN THE POSTERIOR HORN OF BOTH THE MEDIAL LATERAL MENISCI.

INTRASUBSTANCE TEAR/SPRAIN OF THE POSTERIOR FIBERS OF THE ANTERIOR CRUCIATE LIGAMENT

**CHONDROMALACIA PATELLA MEDIAL PATELLAR FACET AS WELL AS OSSEOUS EDEMA
IN THE INTERCONDYLAR REGION OF THE DISTAL FEMUR.**
