PATIENT NAME: Matos, Erica
DATE OF BIRTH: 10/18/82
REFERRING PHYSICIAN: Dr. Tara Smith
DATE OF EXAM: 6/08/22

MRI OF THE RIGHT SHOULDER:

TECHNIQUE: Coronal oblique and axial images of the right shoulder were performed using spin echo and gradient pulse sequences.

CLINICAL HISTORY: Shoulder pain.

FINDINGS: There is AC joint narrowing with acromion spurring. The glenohumeral joint is intact. Impingement is noted. The rotator cuff musculature including the supraspinatus, subscapularis, infraspinatus and teres minor are normal in size without evidence of atrophy or fatty infiltration. The tendons of the rotator cuff reveal tendinosis/tendonitis with intrasubstance tearing of the subscapularis and supraspinatus tendons. The infraspinatus and teres minor tendons are intact. There is synovitis of the patulous axillary pouch of the inferior glenohumeral ligament.

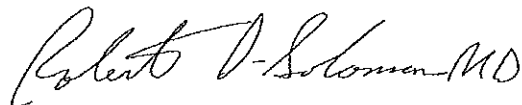

There is a glenohumeral joint effusion.

The biceps tendon and labrum are hypoplastic. The marrow signal is homogeneous. No fractures or subluxations are identified.

IMPRESSION:

1. Impingement.
2. Tendinosis/tendonitis with intrasubstance tearing of the subscapularis and supraspinatus tendons.
3. Glenohumeral joint effusion.
4. Hypoplastic labrum and biceps tendon.
5. Synovitis of the patulous axillary pouch of the inferior glenohumeral ligament.
6. AC joint narrowing with acromion spurring.

Thank you for the courtesy of this consultation.
