### MRI OF THE LEFT ANKLE

**CLINICAL HISTORY:** Left ankle pain, status post MVA.

**TECHNIQUE:** Multiplanar and multisequential MRI examination of the left ankle was obtained.

**FINDINGS:** There is small plantar calcaneal spur. There is no fracture line noted. There are no destructive changes noted.

There is thickening and tendinopathy of the Achilles tendon at its insertion to the calcaneus. The talar dome and subtalar joints are unremarkable. There is normal fat-signal intensity within the sinus tarsi. The posterior tibialis tendon as well as the flexor and extensor and anterior tibialis and peroneal tendons are unremarkable. Anterior talofibular ligament is unremarkable. There is no joint effusion. There is no soft tissue mass.

### IMPRESSION:

1. Small plantar calcaneal spur.
2. Tendinopathy/tendinitis at insertion of the Achilles tendon into the calcaneus.
