

3620 East Tremont Ave., Suite 104  
Bronx, New York 10465

Patient Name: ROSA, ANTHONY  
RDI #: 7231 AR  
Study Date: 12/28/2021  
Exam: MRI RT-KNEE  
Physician: DR IMELDA CRUZ-BANTING

AGE: 046Y (M)  
DOB: 01/15/1975

### FINAL REPORT

**HISTORY:** 046Y status post motor vehicle accident with knee pain

**PRIORS:** none

**PROTOCOL:** Sagittal proton density and T2 weighted images and coronal T1 and STIR images were obtained. Additional axial fat suppressed T2 weighted images were obtained. Images were obtained on a high field MRI.

### FINDINGS:

**Cruciate Ligaments:** Partial tearing of the anterior cruciate ligament is identified. There is no evidence of disruption. The posterior cruciate ligament is intact.

**Collateral Ligaments:** Sprain along the femoral attachment the medial collateral ligament is identified. The ligament is otherwise intact. The lateral ligamentous complex is likewise intact.

**Menisci:** There is a tear within the posterior horn of the medial meniscus. The lateral meniscus is intact.

**Osseous Structures:** Subtle osseous edema is identified within the fibular head likely reflecting underlying contusion. There is also cystic change within the proximal tibia. The remainder the osseous structures are intact.

**Extensor Mechanism:** The patella tendon is intact. The visualized portion of the quadriceps tendon is likewise intact. The patella retinaculæ are intact.

**Joint Effusion:** There is a joint effusion present.

### IMPRESSION

TEAR WITHIN THE POSTERIOR HORN OF THE MEDIAL MENISCUS. ✓  
PARTIAL TEARING OF THE ANTERIOR CRUCIATE LIGAMENT.  
SPRAIN ALONG THE FEMORAL ATTACHMENT THE MEDIAL COLLATERAL LIGAMENT.  
SUBTLE OSSEOUS EDEMA IN THE FIBULAR HEAD LIKELY REFLECTING UNDERLYING  
CONTUSION. NO DISCRETE FRACTURE SEEN. CYSTIC CHANGE IN THE PROXIMAL TIBIA  
IS ALSO IDENTIFIED  
JOINT EFFUSION

Thank you for referring this patient to us for evaluation.

Very truly yours,
