PATIENT NAME: Matos, Erica
DATE OF BIRTH: 10/18/82
REFERRING PHYSICIAN: Dr. Tara Smith
DATE OF EXAM: 6/08/22

MRI OF THE RIGHT KNEE:

TECHNIQUE: Sagittal, axial and coronal images of the right knee were performed using spin-echo and gradient echo pulse sequences.

CLINICAL HISTORY: Pain.

FINDINGS: Marrow signal is unremarkable. The distal femur and proximal tibia are normal. There is no osteonecrosis or fracture.

There is a joint effusion noted. Superficial varicose veins are noted.

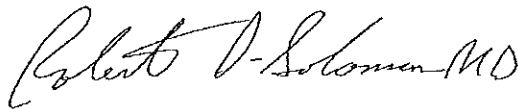

There is quadriceps and patellar tendinosis/tendonitis. There is a supra and infrapatellar plica noted. There is no chondromalacia or mass in the posterior compartment.

The ACL is thickened and heterogeneous with fluid intercondylar notch. The PCL is intact. There is a partial LCL tear. The MCL complex is intact. The medial and lateral menisci are intact without evidence of tearing or morphology.

IMPRESSION:

1. Partial LCL tear
2. Joint effusion.
3. The ACL is thickened and heterogeneous with fluid intercondylar notch.
4. Quadriceps and patellar tendinosis/tendonitis. Supra and infrapatellar plica.

Thank you for the courtesy of this consultation.
