<b>CLINICAL HISTORY</b>	PAIN AFTER MVA	<b>GENDER</b>	F

#### MRI OF THE RIGHT SHOULDER

**CLINICAL HISTORY:** Right shoulder pain, MVA.

**TECHNIQUE:** Multiplanar and multisequential MRI of the right shoulder was obtained.

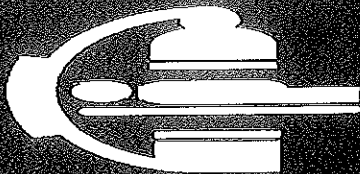

**FINDINGS:** There are hypertrophic changes of the acromioclavicular joint with resorption of distal acromion and clavicle. There is subchondral cyst noted involving the humeral head.

There is full-thickness tear of the supraspinatus tendon with retraction to musculotendinous junction. The infraspinatus, subscapularis, and teres minor tendons are unremarkable.

There is moderate SLAP tear with intact biceps anchor. The long and short heads of the biceps tendon are intact. There is no Hills-Sachs lesion. There is no joint effusion. There is no soft tissue mass.

#### IMPRESSION:

1. Impingement morphology.
2. Subchondral cyst involving the humeral head.
3. Full-thickness tear of the supraspinatus tendon with retraction to musculotendinous junction.
4. Moderate SLAP tear with intact biceps anchor.
