

3620 East Tremont Ave., Suite 104
Bronx, New York 10465

Patient Name: CAMARA, MARIAM AGE: 023Y (F)
RDI #: 9748 MC DOB: 02/13/1999
Study Date: 07/19/2022
Exam: MRI RT KNEE
Physician: DR IMELDA CRUZ-BANTING

FINAL REPORT

HISTORY: 023Y with right knee pain

PRIORS: none

PROTOCOL: Sagittal proton density and T2 weighted images and coronal T1 and STIR images were obtained. Additional axial fat suppressed T2 weighted images were obtained. Images were obtained on a high field MRI.

FINDINGS:

Cruciate Ligaments: Sprain along the posterior inferior fibers of the anterior cruciate ligament is identified. The posterior cruciate ligament is intact.

Collateral Ligaments: The medial collateral ligament is intact. The lateral ligamentous complex is intact.

Menisci: Faint signal is identified in the posterior horn of the medial meniscus with inferior articular extension consistent with a subtle tear. The lateral meniscus is intact.

Osseous Structures: The osseous structures demonstrate normal marrow signal characteristics with no evidence of cortical disruption.

Extensor Mechanism: The patella tendon is intact. The visualized portion of the quadriceps tendon is likewise intact. The patella retinaculæ are intact.

Joint Effusion: Fluid is identified in the suprapatellar recess of the joint

IMPRESSION:

FAINT SIGNAL IN THE POSTERIOR HORN OF THE MEDIAL MENISCUS WITH INFERIOR ARTICULAR EXTENSION CONSISTENT WITH SUBTLE TEAR.

SPRAIN ALONG THE POSTERIOR INFERIOR FIBERS OF THE ANTERIOR CRUCIATE LIGAMENT.

FLUID IN THE SUPRAPATELLAR RECESS OF THE JOINT
