**CLEMENT A DAVIS**  
**DOB:** 02/16/1955  
**Exam Date:** 07/08/2022

**N10110905-EE**

**Report Date:** 07/11/2022

**REHAN KHAN MD**  
**61-27 WOODSIDE AVE**  
**WOODSIDE, NY 11377**

**MAGNETIC RESONANCE IMAGING OF THE LEFT SHOULDER**

**TECHNIQUE:** Multiplanar, multisequential MRI was performed in the 20-degree tilt position.

**HISTORY:** Patient complains of left shoulder pain with moderate range of motion, status post motor vehicle accident on 06/15/2022.

**INTERPRETATION:** AC joint arthrosis. No separation. No lateral sloping of the acromion. No inferior curvature. Narrowing of the supraspinatus outlet. No narrowing of the humeral-acromial interval.

Infraspinatus tendon is intact. No muscle atrophy or tear.

Supraspinatus tendinopathy. No muscle atrophy or tear.

Biceps is intact within the groove. Tendinopathy extends to the anchor. No tenosynovitis.

Subscapularis is intact. No muscle atrophy or tear.

Anterior capsular thickening. Posterior inferior capsular thickening

Posterior inferior labrum is intact. Anterior inferior labral nondisplaced tear. Superior labral fraying and tear.

No fracture, dislocation, or erosion. Mild arthrosis of the glenohumeral joint.

**IMPRESSION:**

- Fraying and tear of the superior labrum and anterior inferior labrum. Biceps tendinopathy.
- Capsular thickening which can be seen with adhesive capsulitis.
