Patient ID: 948895
Date of Birth: 06/26/1977

Date of Service: 02/03/2020 3:14 PM
Referring Physician: Weiss, Scott
Referring Physician fax: (973)365-2371

MRI RT KNEE W/O

RIGHT KNEE MRI

REASON FOR EXAM: 42-year-old male. Pain. Fall.

TECHNIQUE: Standardized fat and water weighted pulse sequences were obtained in all 3 orthogonal planes.

COMPARISON: None.

FINDINGS:

Grade 2 cartilage loss at the patellofemoral articulation. Lateral compartment articular cartilage preserved. Medial compartment grade 2/3 cartilage loss. 4 mm osteochondral lesion at the lateral femoral trochlea (sagittal image 12 series 4). No acute fracture. No dislocation. No bone destruction. Minimal patellar bone marrow edema (sagittal image 11 series 5).

Medial meniscus intact. Lateral meniscus intact.

Trace joint effusion. No popliteal cyst. Mild semimembranosus muscle strain with additional faint pes anserinus peritendinitis. Mild soft tissue swelling.

Normal medial collateral ligamentous complex (MCL).

Normal proximal tibiofibular articulation. Normal lateral collateral ("fibular") ligament. Normal popliteus tendon. Normal biceps femoris tendon.

Normal anterior cruciate ligament (ACL). Normal posterior cruciate ligament (PCL).

Normal medial and lateral patellar retinaculum.

Normal quadriceps tendon. Normal patellar tendon. Normal Hoffa's fat pad.

IMPRESSION:

Mild patellofemoral cartilage loss

MRI RT KNEE W/O

Mild/moderate medial compartment cartilage loss

Faint patellar bone marrow edema/contusion

4 mm lateral femoral trochlea osteochondral lesion

Mild semimembranosus muscle strain with faint pes anserinus peritendinitis

Trace joint effusion and mild soft tissue swelling

Menisci, cruciate and collateral ligaments intact
