

3620 East Tremont Ave., Suite 104
Bronx, New York 10465

Patient Name: MUNOZ, MARIA
RDI #: 8882 MM
Study Date: 04/12/2022
Exam: MRI RT SHOULDER
Physician: DR RICHARD SELDES

AGE: 054Y (F)
DOB: 01/30/1968

FINAL REPORT

MRI EXAMINATION OF THE SHOULDER WITHOUT GADOLINIUM:

HISTORY: 054Y status post injury with right shoulder pain

PROTOCOL: Coronal and Sagittal T1 and fat suppressed T2 weighted images as well as axial fat suppressed T2 weighted images were obtained.

PRIORS: None.

FINDINGS:

Tendons:

Disruption of the supraspinatus tendon with retraction of tendon fibers to the mid humeral head is identified. Full-thickness tear of the infraspinatus tendon with partial retraction some fibers is also identified. The subscapularis tendon is intact. Intrasubstance tear within the proximal intra-articular biceps tendon at the biceps anchor is identified.

Labrum:

The glenoid labrum is intact.

Osseous structures: Mild AC joint arthrosis is identified. The osseous structures are intact.

Fluid: Fluid is identified in the subacromial, subdeltoid and subcorocoid bursa and in the glenohumeral joint

IMPRESSION

DISRUPTION OF THE SUPRASPINATUS TENDON WITH RETRACTION OF TENDON FIBERS TO THE MID HUMERAL HEAD.

THERE IS FULL-THICKNESS TEAR OF THE INFRASPINATUS TENDON WITH PARTIAL RETRACTION OF SOME FIBERS.

INTRASUBSTANCE TEAR OF THE PROXIMAL INTRA-ARTICULAR BICEPS TENDON AT THE BICEPS ANCHOR.

FLUID IN THE SUBACROMIAL, SUBDELTOID AND SUBCORACOID BURSA AS WELL AS WITHIN THE GLENOHUMERAL JOINT
