

Exam requested by: MOHAMMAD ISLAM MD 40-24 82ND ST ELMHURST NY 11373 SITE PERFORMED: JACKSON HEIGHTS

SITE PHONE: (718) 544-5151

Patient: CARDENAS, NILSON Date of Birth: 03-31-1955 Phone: (646) 267-1162

MRN: 15282583R Acc: 1023859906

Date of Exam: 07-27-2022

EXAM: MRI RIGHT SHOULDER WITHOUT CONTRAST

HISTORY: Shoulder pain. Status post motor vehicle accident.

TECHNIQUE: Multiplanar, multi-sequence MRI of the right shoulder was obtained on a 3T scanner according to standard protocol.

COMPARISON: None.

FINDINGS:

BONE MARROW: No fracture or avascular necrosis. ACROMIOCLAVICULAR JOINT: Mild osteoarthrosis.

BURSITIS: Mild to moderate bursitis.

ROTATOR CUFF TENDONS: Rotator cuff tendinosis with a moderate grade articular sided partial thickness tear of the supraspinatus tendon with the torn tendon fibers retracted 12 mm medially series 7 image 12. Is also a low-grade concealed interstitial delaminating partial thickness tear along the anterior fibers. There is a moderate grade partial thickness tear of the infraspinatus tendon with intrasubstance delamination series 5 image 7, series 7 image 15. Low to moderate grade partial-thickness tear of the subscapularis tendon series 5 image 8, series 3 image 15.

BICEPS: Mild tenosynovitis. No visualized tear. No subluxation or dislocation at the bicipital pulley.

GLENOHUMERAL JOINT: No focal cartilage lesion. No joint effusion or intra-articular bodies.

LABRAL LIGAMENTOUS COMPLEX: Superior labral anterior posterior tear extending to the anterior labrum series 7 image 14, series 3 image 13, series 8 image 12.

ROTATOR INTERVAL: Unremarkable.

CORACOACROMIAL AND CORACOCLAVICULAR LIGAMENTS: Intact. No visualized tears.

MUSCLES: Normal signal characteristics and bulk without edema or atrophy.

QUADRILATERAL SPACE: Normal without masses.

IMPRESSION:

Rotator cuff tendinosis with a moderate grade partial thickness tear of the supraspinatus tendon with the torn tendon fibers retracted 12 mm medially.

Low to moderate grade partial thickness tear of the subscapularis tendon.

Low-grade partial-thickness tear with intrasubstance delamination of the infraspinatus tendon.

Patient: CARDENAS, NILSON

Date of Birth: 03-31-1955

Mild AC joint osteoarthrosis with mild to moderate bursitis.

Superior labral anterior posterior tear extending to the anterior labrum.

Mild biceps tenosynovitis without biceps tendon tear.

Thank you for the opportunity to participate in the care of this patient.
